Stress Management

Stress: an emotional and physical response to demanding situations, including symptoms that may include worry, a feeling of being overwhelmed, increased heart rate, headaches, sleep difficulties, procrastination, and more.

Describe your largest sou	ırce of stress, in detail.		
Briefly list two other stres	ssors you are experiencing.		
1			
2			
Circle any symptoms y	ou have experienced in r	esponse to stress.	
Anger / Frustration	Anxiety	Decreased Sex Drive	Drug or Alcohol Use
Fatigue	Headaches	Indigestion	Muscle Tension
Nail Biting	Over or Under Eating	Procrastination	Sleep Difficulties
Social Withdrawal	Teeth Grinding	Worry	Other

Contrary to popular belief, not all stress is bad. The stress response is a powerful tool used by your body to increase the odds of overcoming obstacles. It's when stress becomes too intense, or lasts for too long, that it becomes problematic.

Stress Management

The negative effects of stress can be reduced with the use of social support, emotional management skills, maintaining a healthy life balance, and attending to basic needs. In the following pages, we'll explore each of these strategies.

Social Support —	
	cannot solve a problem, just talking can sometimes be enough. ms, hormones are released inside our brains that ease the ss.
List three people who you can tur	n to for support.
Name:	How they can help:
How can you use social support to	o ease one of your current stressors?
Emotional Management–	
are ignored, they can exacerba	ons such as anxiety, self-doubt, and anger. When these feelings te the original stressor. Remember, emotional management isn't s about dealing with them in a healthy way.
When faced with unpleasant emo	tions, do you have any habits or tendencies that worsen the situation?
List two ways that you have succe	essfully handled unpleasant emotions in the past.
